# Built

*tough, built to last*

Canspa takes pride in using only the best components in the industry, such as genuine Lucite® Xtra Acrylic sheets Featuring Microban® antimicrobial product protection. Microban® is an antimicrobial protection that provides resistance to the growth of bacteria, which causes odour and stains on the spa's surface. Canspa features Waterway hydrotherapy jets, pumps and filters for exception durability.

### Three-Ply Fabricate Shell

Every Canspa sap is manufactured to the highest standards using a single sheet, three-ply acrylic and ABS shell, combined with a fiberglass backing for added strength and durability.

### Water Diverter Valve

Send the flow of water instantly to separate jets around the spa with a simple turn of the dial.

### Deep Soaking Seats

Canspa designs each comfort zone with a variety of jets from vigorous to gentle to achieve a complete massage.

### Microprocessor Control Panel

Finger-tip controls allow instant adjustments to water temperature, preprogrammed filter modes, individual pumps, blower and lighting.

### Hot Air Injector

Boosts the power of the water jets by diverting the warm air

### Air Flow Control

Adjust the massage action and jet pressure by changing the air flow.

### Vibrant Colour

Canspa offers a variety of colour choices

### Ozone Cleaning System

An ultraviolet light system acts to ozone the water at regular intervals disinfecting and controlling bacteria in the water.

### Full-Foam Insulation

Foam between the spa shell and cabinet insulates & retains heat, while protecting the plumbing and improving energy efficiency.

### Shut-Off "T" Valve

"T" water valves are located in front of pumps to prevent water loss during any maintenance or repairs.

### Plumbing Harnesses

Every fitting is secured and pressured tested. The lines are routed throughout the spa to allow for precise jet allocation and maximum efficiency.

### Drainage System

Canspa conveniently located the drain system at the bottom of the spa for easy maintenance.

### Water Filtration

For complete flow-through purification Canspa uses a single or dual canister filter system.

### Energy Efficient Motors

Quiet and powerful, 4.5 Hp or 5 Hp pumps provide consistent water pressure throughout the spa.

### Solid Frame Construction

A Canspa spa is built from the ground up with a totally enclosed floor and reinforced framing.

### Heater Air Blower

Unleash thousands of tiny heated bubbles into the air and water jets to relax pressures points.
